

TAIPAN Penetration Testing Platform

TAIPAN is a Plug and Play Penetration Testing Appliance engineered and designed to offer the customer a worry free pentesting experience.

The TAIPAN software is deployed on a compute appliance, cyphered with military grade Encryption and placed in the customer network in order to perform attack scenarios and validate exploitable vulnerabilities. Pentesting with TAIPAN is an essential exercise for any organizations willing to improve its Cyber resilience.

WHY TAIPAN?

There is a big gap getting wider day by day between companies Attack surface and penetration testing. More Pentesting is needed to improve your security posture And TAIPAN is the answer for more, faster and safer Pentests.

WHO IS TAIPAN DESIGNED FOR?

CISOs & IT Managers: get in depth view & control of their Pentesting strategies.
Pentesters: get a comprehensive and easy to use Penetration testing tool.
